RESTRICTION REQUIREMENT

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

- I. Claim 1, a device, classified in Class 257, subclass 66.
- II. Claims 2-17, drawn to a method of making a device, classified in Class 438, subclass 149.

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the crystalizing agent could have been any of the many available metals in the art. The amorphous silicon could even be first crystallized and transfered before prior to deposition on the insulation film.

Because these inventions are distinct for the reasons given above and as shown by the above different classifications, the fields of search are not co-extensive and separate examination would be required for examination purposes and the restriction requirement as indicated is proper.
